DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6, 8-14, 15-17, 19-26, 27, 28, 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mao et al (6771001). For claims 1, 15, 21, 27, 29, Mao et al in fig. 1A disclose an actuator system for a MEMS device. In the description in col. 4, lines 37-65, there is a comb actuator drive 18 that moves parallel to the substrate and pulls spring arms 16 and flexible hinges 20, 22 that moves section 26 perpendicularly to the motion of the comb drive actuator. However, the motion is not conveyed by flexible beams, but the structure 26 is made with thin walls which deform and then springs back, and this is the same principle and is equivalent to having flexible beams. The number of beams and actuators is a design choice depending on the number of MEMS devices one needs to move. The type of spring structures and the number of movable portions to the actuator are design choices that depend on how flexible or controlled the motion of the MEMS device need to be.

3. Claims 7 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: In the claimed invention, having within a pair of beams the ability to bend each of them by different amounts is not shown or suggested by the prior art.

Art Unit: 2873

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Turner et al (6497141) in a similar device show comb actuators moving a cantilever structure.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard Hanig whose telephone number is 571-272-2329. The examiner can normally be reached on M-F: 8:00-4:30.
